Corrections to the steel types to be used for classifying for corrosivity

Transmitted by the expert from Belgium

[PDF](#)

At the fifty-fourth session of the Sub-Committee of Experts on the Transport of Dangerous Goods, Belgium presented informal document INF.15 in which it was explained that there is a difference between the English and the French versions of paragraph 2.2.8.3 c) ii) of the Model Regulations. The English version allows testing for corrosivity to be performed on steal type Unified Numbering System (UNS) G10200 or a similar type. The French version on the other hand does not mention the wording “or similar type” and thus was more restrictive than the English text (see underlined text).
